

## ABSTRACT

A container for optical analysis composed of a  
5 bottom portion and a sidewall portion, wherein the bottom  
portion and the sidewall portion are made by a resin  
containing an alicyclic structure, and surface roughness  
Ra is 1  $\mu\text{m}$  or less, at the point where light for the  
optical analysis passes through, in the area where the  
10 bottom portion and the sidewall portion contacts with the  
measuring subject therefor.
